Technical Leader | Mobile, Field & Operations Systems

Technical leader with deep experience building and delivering mobile and field-based applications in real-world environments. Proven ability to bridge business needs, technical execution, and operational constraints across distributed teams.

Specializes in translating complex, messy workflows into scalable systems—especially in environments where connectivity, reliability, and real-world usage conditions matter.

Career Background

Software Development Lead – Mobile & Field Systems

AmeriGas | 04/2016 – Present

- Led delivery of mobile and field applications supporting real-world operations across distributed teams
- Conducted real-world testing in low-connectivity environments (e.g., rural and canyon regions) to validate system performance
- Bridged business requirements, technical implementation, and field execution across routing, telematics, and mobile platforms
- Identified gaps between system design and real-world usage, improving reliability and usability in production
- Coordinated across engineering, product, and operations teams to deliver scalable solutions under non-ideal conditions
- Provided field-informed feedback on navigation and tooling based on real-world usage scenarios
- Exploring practical applications of AI to improve workflow clarity and development efficiency

Mobile Application Developer

Globus Medical | 06/2015 – 04/2016

- Led architecture and delivery of mobile and cloud systems supporting FDA-regulated clinical workflows
- Defined system requirements across mobile, backend, and cloud services
- Produced architecture documentation for FDA and CE submissions
- Performed risk analysis for Class 3 medical devices
- Coordinated cross-functional teams under strict compliance requirements

Owner / Developer

Bromance Labs, LLC | 10/2012 – 2017

- Developed and launched 5-star rated SleepLab iOS app
- Built and managed client-facing web and mobile applications across multiple industries
- Led development strategy for consumer-facing and small business software solutions
- Developed cross-platform applications and early-stage product concepts

Earlier Experience (Selected)

Software Architect / Application Architect

Kingstree Group / CloudMine | 2012 – 2014

- Delivered enterprise mobile and web applications supporting clinical trials and data-driven workflows
- Led architectural improvements across infrastructure, security, and application design

Operations Supervisor / Technical Product Support Manager

Vitalyst, LLC | 2006 – 2012

- Led technical support operations supporting 60k+ users across 20+ enterprise clients
- Developed mobile applications integrating enterprise systems (Salesforce APIs, reporting tools)

Early Career: Web & Technical Roles

- Built web applications, managed infrastructure, and supported client environments

Technical Focus

Mobile & Field Systems • Enterprise Workflows • API & Data Integration
• Distributed Systems • Cloud-Connected Applications • Real-World System Validation • Agile Delivery • DevOps & CI/CD • AI-Assisted Workflows

Tools & Technologies

Languages & Platforms:

JavaScript, PHP, iOS (Objective-C, Swift, SwiftUI), Web Technologies (HTML, CSS)

Frameworks & Tools:

AngularJS, WordPress, Cordova / PhoneGap, Bootstrap

Data & Integration:

SQL, JSON, XML, REST APIs, MongoDB

Development & Delivery:

Git, CI/CD Pipelines, DevOps Practices, Jira, Confluence

Emerging & Applied AI:

Generative AI (text, image, audio), AI-assisted development workflows

Leadership & Community

- Elected Councilman, Vice President, Borough of Phoenixville
- Board Member, Phoenixville Healthcare Access
- Chairman, Alianzas de Phoenixville
- Member, Planning Commission
- Volunteer & Speaker, Peace Advocacy Network
